

STEEL STRUCTURE DESIGN BUILT FOR EXECUTION.

Clear details and buildable connections
— ready for fabrication and installation.

The Challenge

Steel projects rarely go off track because of one big mistake. It's usually the small things: unclear details, conflicting inputs, and late changes that only surface in the workshop or during installation as delays, rework, and extra cost.

The Solution

Rymy Consulting delivers steel structure design with a strong focus on buildability and smooth collaboration between stakeholders. You get a clear, practical package that supports fabrication and installation and keeps the project predictable.

What we do

Design & detailing

Steel structure design for industrial and construction projects.

Connection solutions

Buildable connection design that supports fabrication and installation.

Support during the project

Fast clarifications and change support when questions come up.
