

BIM

BIM COORDINATION THAT KEEPS MODELS ALIGNED.

Clear model alignment, reliable status visibility,
and fewer surprises from design to fabrication and
site execution.

The Challenge

A BIM model only adds value when it's coordinated and kept up to date. In real projects, the same issues come up again and again: clashes between disciplines, different parties working from different versions, and an unclear picture of what's actually current. When that happens, problems show up too late, in fabrication or on site, and the result is delays and extra cost.

The Solution

Rymy Consulting handles BIM coordination so the models stay aligned, changes are controlled, and everyone works from a shared, up-to-date view of the project. The goal is simple: less firefighting, more predictability.

What we do

Coordination & clash checks

We catch conflicts early and turn them into decisions before they become site issues.

Version control & up-to-date models

We make sure everyone is working from the agreed, latest version.

Coordination in practice

Coordination meetings, issue lists, and clear follow-up: who does what, by when.
